**RV-2017-02**

Introduction

X-ray fluorescence analysis is a widely used technique for the rapid screening analysis of catalytic converter samples.

However, dedicated standard material is needed for the calibration of XRF instruments. As a worldwide supplier for XRF laboratories, FLUXANA has developed a number of services to support XRF users. One of these services is the production of new reference materials and the organization of proficiency tests (PT).

In 2011, FLUXANA introduced its own quality management.

In February 2014, FLUXANA received accreditation from German DAKKS according to DIN EN ISO/IEC 17025 for its test laboratory in Bedburg-Hau.

The production of reference materials and the performance of proficiency tests is not yet accredited. However, FLUXANA has applied for the accreditation process at DAKKS.

Nevertheless, all evaluations are performed in agreement with DIN EN ISO/IEC 17043:2010-05, ISO Guide 34:2009, ISO Guide 31:2000 and ISO Guide 35:2006.

Further information

All laboratory data are listed in the following evaluation report. Additional information about laboratory accreditation and analytical methods used is also provided. Calculation was done only on traceable methods. The laboratory performance is shown based on z-scores. The diagrams show the laboratory data in comparison with the calculated mean values.

Outliers

Outliers in the statistical sense are typically not detected when using robust statistical methods, because the robust A+S algorithms were found to work better for small populations than the classical approach (which is outlier detection plus arithmetic mean and classical s.d. formula). Analytical data identified as errors were removed before performing the statistical evaluation.

RV-2017-02

Statistical Evaluation

Calculation of Mean m

The mean m for all laboratories was calculated using the Hampel estimator (ISO/TS 20612:2007 9.2.3) based on the laboratory means μ using traceable methods only.

Calculation of reproducibility standard deviation s_R

The reproducibility standard deviation s_R was calculated using the Q-method (ISO/TS 20612:2007 9.2.3).

Calculation of repeatability standard deviation s_r

The repeatability standard deviation s_r was also calculated using the Q-method.

Calculation of robust standard deviation s^*

The robust standard deviation s^* was calculated from the laboratory means μ using the Q-method.

Calculation of uncertainty U_{s_R} (according to Nordtest TR 537 ed 3.1.)

The uncertainty U_{s_R} for a confidence interval of P=95% (k=2) can be calculated from the **reproducibility standard deviation** s_R (factor 1.25 for average median, robust statistics):

$$U_{s_R} = 2 * 1.25 * \frac{s_R}{\sqrt{p}}$$

Calculation of uncertainty U_{s^*} (according to ISO 13528:2015)

The uncertainty U_{s^*} for a confidence interval of P=95% (k=2) can be calculated from the **robust standard deviation** s^* (factor 1.25 for average median, robust statistics):

$$U_{s^*} = 2 * 1.25 * \frac{s^*}{\sqrt{p}}$$

The uncertainty U_{s^*} only takes the between laboratories uncertainty into account while the uncertainty U_{s_R} also includes the within laboratories uncertainty. Therefore U_{s_R} is recommended for use in accredited laboratories.

RV-2017-02

Laboratory performance

Laboratory proficiency assessment was based on z-scores.
The **z-score** z was calculated from all laboratory means μ :

$$z = \frac{m - \mu}{s_R}$$

m	Mean value for all laboratories (assigned value)
μ	Mean value of individual laboratory
s_R	Reproducibility standard deviation

Assessment on z-scores:

$ z \leq 2.0$	indicates "satisfactory" performance = generates no signal
$2.0 < z < 3.0$	indicates "questionable" performance = generates a warning signal
$ z \geq 3.0$	indicates "unsatisfactory" performance = generates an action signal

Z-scores with $3 \geq |z| \geq 2$ were highlighted with a yellow color, z-scores with $|z| \geq 3$ were highlighted with a red color.

Traceable analytical methods used

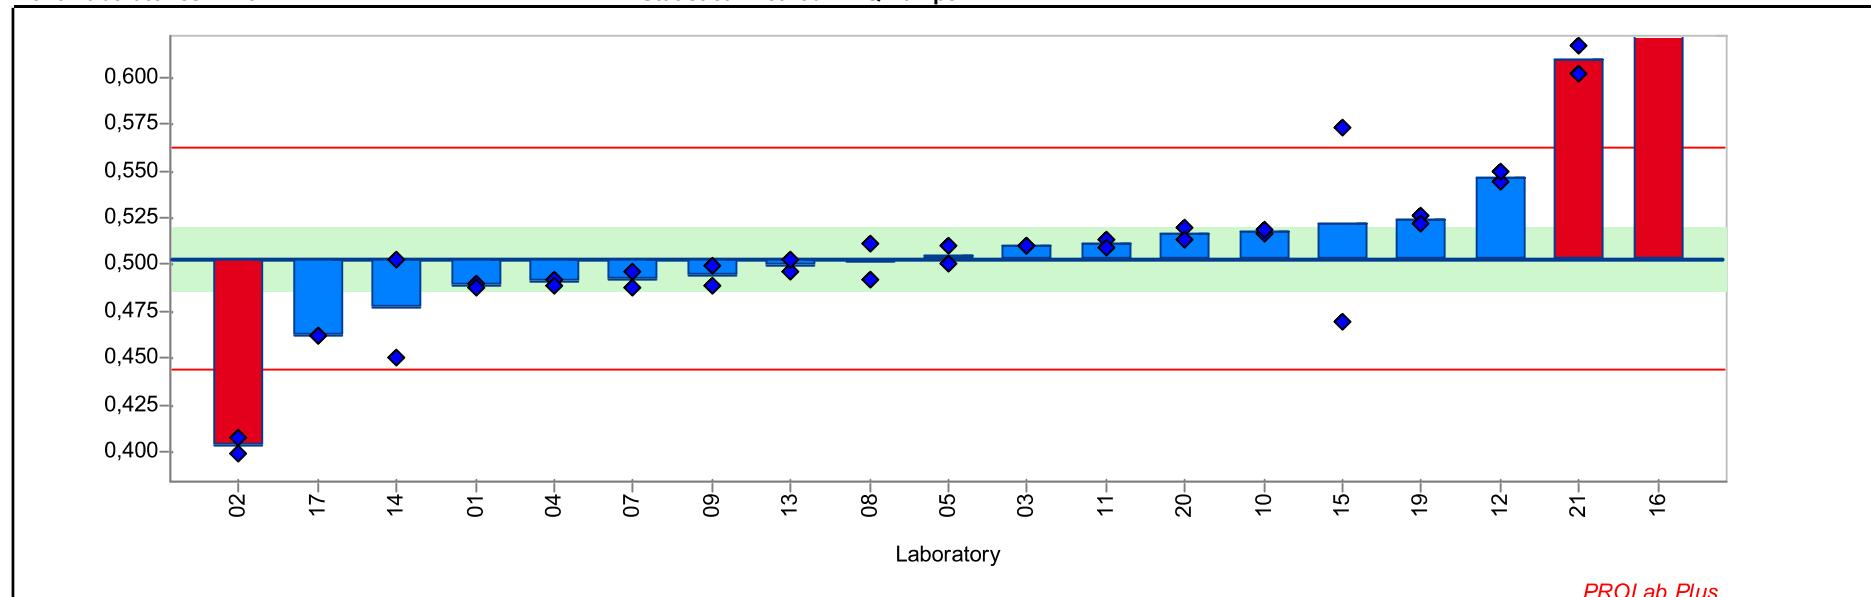

XRF (fusion), XRF (fusion) ASTM C1271
 ICP-OES, ICP-OES ASTM D6349-13 WR
 AAS, AAS ASTM D6349-13 WR
 CaO: Wet chemistry ASTM C25 cap.31, titration
 LOI: Annealing @ 1050 °C with weighing
 Na₂O: Wet chemistry ASTM C114
 SO₃: Combustion with IR-Detection, Gravimetric

Analytical methods shown as info only
